

Student Name _____ Date _____

School of Enrollment _____

Instructions:

Read through the worksheet.

Complete the activities and questions.

Save your completed worksheet as a .pdf or .jpeg file.

Scan and upload completed worksheet to your Flex course.

Why or How?

Asking why or how is very important when trying to understand plants, animals, and the world around us. It is a great tool used in science.

1. What is something you wonder about? Write your question below.
(Some examples: Why leaves are green? Why do we have bones? How do birds fly? How or why leaves change color? Why animals hibernate?)

2. Read about or watch a video (with your Parents' permission) to learn the answer to your question from #1.

Write 2 or more sentences sharing the answers you found to your question. (if you found different answers in different books or sites tell us about it!)
